Noted Alumnus To Speak

G. E. STOLTZ

Mr. G. E. Stoltz, E.E. in M.E., 1909, has accepted the invitation to be guest speaker at the annual Engineers' Banquet on February 14. He is manager of the mining and metal working division of the electrical and industrial department of the Westinghouse Electric and Manufacturing Co. at East Pittsburg, Pa.

Mr. Stoltz is well known in the industrial world, especially for his invention of a.c. adjustable speed equipment for rolling mill drives. Rolling operations have been made practically automatic as a result of his invention.

He is a member of the American Institute of Electrical Engineers, American Iron and Steel Institute, Association of Iron and Steel Electrical Engineers, and Engineering Society of Western Pennsylvania. He has contributed articles to numerous trade journals.

While at Ohio State, Mr. Stoltz was a member of Eta Kappa Nu. After graduation he went directly to the Westinghouse Co. He has been quite interested in the welfare of the University, having been president of the Pittsburgh Ohio State Alumni Association, 1927-28, and having served on the board of directors of the Ohio State Alumni Association for several years.

Plans are being made to conduct this year's banquet similar to the one held a year ago. A large audience is expected. The tentative price is 50 cents a plate.
